POWERING DIGITAL IDENTITY

# INTRODUCING SATURN ONE

The Saturn-One is a complete solution to dispense SIM cards and verify your customers. In addition, the kiosk offers biometric authentication, including facial recognition, fingerprint verification and ID document validation. Equipped with a cash dispenser and thermal printer, the Saturn-One enables your customer experience with instant SIM issuance, SIM swaps, bill payments, and transfer of ownership.

The Saturn-One will maximise throughput in your store and automate transactions, freeing your sales associate to be more effective. Furthermore, it provides an effective channel to service the unbanked and to provide a personalised user experience.

A complete graphical management system includes ticketing, remote support, alarms, provisioning, and transaction monitoring. In addition, an advertising server is installed to manage the display of videos and pictures and can serve adverts based on demographics determined by the facial cameras.

The Saturn-One is redefining the future of retail customer experience and will reduce costs, monetise your retail estate, enhance customer retention and improve revenues.

## BENEFITS

- ✓ Maximise Store Throughput
- ✓ Automate Transactions
- ✓ Enhance Sales Associate Effectiveness
- ✓ Service the Unbanked
- ✓ Improve Customer Experience

Biometric Onboarding

SIM Dispensing

Bill Payment

SIM Swap

Transfer Ownership
